

Mr. Dobre Tasevski, Grad. Civ. Eng.,
Chairman of Managing Board - SINTEK
Research & Development Department Manager

guarantees needed for participation on tenders out of our country, patterns for regular payment, increase of the already existing funds aimed for giving scholarships to the young educated people, investments related to the utilization of the natural resources for production of materials for constructive works and etc. It means that, in such a way of functioning, companies could very quickly compensate all that they have lost during the period of transition and, the Construction industry is finally going to be set up on firm basis. For that purpose, companies should engage real enthusiasts and appoint them on key positions. With their accurate decisions, these people could give an enormous contribution into the designated goals for rising of the rating referring to the constructive mechanization and production of materials for constructive works. Within the course of their co-operation, these two segments must constantly complement each other and show creativity in order to utilize the natural resources for the needs of the Construction industry.

Natural resources of Republic of Macedonia offer many possibilities for production of materials for constructive works that can be used in all parts of construction projects such as: raw materials for preparation of the elementary materials for construction as well as production of materials for electrical, waterworks and sewerage installations, production of materials for hydro, thermo and fire isolations, materials for final processing (such as: linings, plasters or drifts), chemical materials for the needs of the Construction industry and etc.

In fact, as a combination from the world trends, domestic potentials and experience of our construction companies joined with good organization and financial support, results must come up to the surface. Tradition and recognizable quality of our construction companies have been built in all over the world for the present and future generations.

The main segment for identification of a certain nation is undoubtedly, its tradition that is declared through the culture, arts, sports, architecture, authenticity, consolidation of the urban and traditional way of life and etc. Despite of the abovementioned elements, Macedonian nation is also recognizable by its traditional Construction industry that has been well-treated throughout the past ages and, especially by its rapid development during the 1960s.

Republic of Macedonia is proud on its participation independently or as a partner in the realization of many capital projects in the country and abroad carried out through its scientific, scientific-research, projecting, manufacturing, operative and other joining segments. All these segments have contributed and they still do in order for the Construction industry to remain the leading segment of the entire Macedonian economy. Even though the period of transition has imposed great turbulences into the entire economy of the country, tradition has remained. Because of all these facts, reorganization of the bigger companies like: PELAGONIJA, GRANIT, MAVROVO, BETON, ISKRA, FAKOM, and METALEC, as well of the smaller ones such as: ILINDEN, TEHNIKA, TRUDBENIK, and other companies was inevitable. They were all constrained to reduce the great number of contractors independently on their qualification background. These circumstances created an opportunity for forming a series of new small and medium-sized enterprises as an integral part of the Construction industry.

Thereby, the tradition survived and it is here, there is a desire for maintaining tradition, and if the strength and skillfulness for continuous development are to be improved, the future of the young educated people will be secured. It could be realized through the higher life standard resulting from the increased investments in the sphere of Construction industry, unlike 10-15 years ago when the number of young educated people in this sector was minor because of the low interest for investments.

By the engagement of the Government's institutions in the sphere of Construction industry and, especially in the part of the programmes for increased foreign and domestic capital expenditures as well provision of favourable credit arrangements and

Dobre Tasevski
